However, it is not programming and methods for computer simulation, as in the previous chapter, that are the focus of this chapter. The emphasis is on the design of the system, the way it is built, the way it is used, and the way it is maintained. The design of the system is the most important part of the system, and it is the design that determines the way the system is used and the way it is maintained. The design of the system is the most important part of the system, and it is the design that determines the way the system is used and the way it is maintained.
